GREEN TIP

Individuals can save energy for the future and save money in the present with easy measures. For example, adjust home thermostats to reduce heating or cooling while the residents are out. Or form a carpool to save money on gas while reducing carbon emissions from cars. Also, consider small home electronic adjustments. Some electronic devices continue to draw power even when switched off. Either unplugging appliances when not in use or plugging devices into a smart power strip will cut down on wasted energy. Consider these small steps to save money and energy both for now and later.
