

SQUARE SCRUB

EBG-20/G

SURFACE PREPARATION MACHINE

One of the *most*
**innovative
& exciting**
new products to be
introduced into the
floor care industry
in years!

- Better, more consistent results than rotary machines
- No large swirl marks
- Low airborne dust
- Prepares up to 5000 sq ft per hour
- Sanding Screens can be used for up to 500 sq ft per side
- Quiet operation (Less than 73dba)
- Easy operator training in minutes
- 100' long power cord

Square is better

Round versus Square

No extra hand scrubbing required with the Square Scrub. It does all the work!

Extra heavy for gym floors

Use with Screens or Surface prep pads

Added weight for a faster cut. Great job on black marks.

Gets close to edges

Perfect in doorways

Clean edges, even in doorways! Gets the edges and gets the corners!

The Square Scrub EBG20/G Gym Floor Preparation Machine was born to maximize productivity when screening wooden gymnasium floors in preparation to be recoated with gym floor finish. The EBG20/G can screen up to 5000 sq ft of wooden gym floor per hour. The EBG20/G weighs in at a hefty 165 lbs and packs a 1.5 horsepower 3450 rpm motor. The EBG20/G's weight increases pad pressure and produces superior results compared to rotary machines, even at high travel speed on the floor. The high rpm of the EBG20/G's motor increases productivity and provides a smooth consistent preparation scratch. Many users have reported extended sanding screen life over rotary machines of up to 1000 sq ft per screen! Screen costs can be cut almost in half! The scratch mark produced by the EBG20/G is much less noticeable than the large round scratch swirl marks made with rotary machines. Always follow the manufacturer's instructions for your favorite gym floor finish product.

The Square Scrub EBG-20/G is equipped with a heavy duty 100 foot long 12 gauge power cord. This should be sufficient for most gym floors; if more cord length is needed to get the job done we recommend at least a 10 gauge extension power cord.

The Square Scrub EBG20/G is based on the design of our best selling EBG20 floor preparation machine. The EBG20/G can be used for in the same manner as the EBG20 for refinishing resilient tile floors, however we recommend the use of our Dust Containment Kit when using the EBG20/G on resilient tile flooring. Ask your Square Scrub representative for more details.

SQUARE SCRUB

EBG-20/G

SURFACE PREPARATION MACHINE

Pad Size

14" x 20"

Motor

1.5HP, 3450RPM, 9.5 Amp draw under normal operating conditions, overload protection
